SUMMARY

I am a second-year Artificial Intelligence Engineering undergraduate at SLIIT with a strong foundation in artificial intelligence, machine learning, and data analysis. I am passionate about building intelligent, data-driven solutions utilizing my problem-solving skills through academic and practical experience. I am highly computer literate, possess a strong work ethic, and am committed to continuous learning. I am currently seeking an internship to apply my knowledge in a real-world environment and further enhance my skills in artificial intelligence.

EDUCATION

BSc (Hons) in Information Technology Specializing in Artificial Intelligence 06/2026 - Present
Sri Lanka Institute of Information Technology CGPA: 3.19/4.00

GCE Advanced Level (2023) - Rahula College, Matara

GCE Ordinary Level (2020) - St. Thomas' College, Matara

TECHNICAL SKILLS

Programming Languages: JavaScript, HTML, CSS, SQL, Java, Python, C

Frameworks & Libraries: React.js, Node.js, Express.js, React Native, Flask, FastAPI, PyTorch, LangChain, Expo, Vite, TensorFlow/Keras, scikit-learn, Axios, NumPy, Pandas, Matplotlib, Seaborn, Bootstrap

Tools & Platforms: GitHub, VS Code, Figma, MongoDB, MySQL, ChromaDB, Render, Vercel, Netlify, Eclipse, Tomcat, Oracle, EmailJS, Jupyter

PROJECTS

- People's Healthcare – Intelligent Healthcare System** [GitHub](#) Feb 2026 – May 2026
- Built a full-stack medical center management system for a real-world client with six user roles, covering appointment scheduling, digital prescriptions, lab test management, pharmacy inventory and billing, and equipment management. Integrated five AI services — a skin disease classifier using a custom SE-ResNet18 CNN across nine disease classes, a vitamin deficiency predictor using an ensemble of SVM and DNN models, a heart disease risk predictor using Random Forest returning low/moderate/high risk scores, a clinical guidelines RAG service for hypertension and diabetes using vector retrieval and LLM inference, and a navigation assistant that guides users through system workflows using context-aware responses.
- Technologies:** JavaScript, React.js, Node.js, Express.js, MongoDB, Python, Flask, FastAPI, LangChain, ChromaDB, Groq (LLaMA), scikit-learn, TensorFlow/Keras, PyTorch, JWT, Vite, Tailwind CSS
- People's Health Care App – Cross-Platform Mobile Application** [GitHub](#) Mar 2026 – May 2026
- Developed a cross-platform mobile application for the People's Health Care system, extending the web platform's functionality to iOS and Android with six role-specific interfaces. Covers appointment scheduling, digital prescriptions, lab test management, pharmacy inventory and billing, and equipment management — with an integrated navigation assistant that guides users through system workflows using context-aware responses. Integrated secure token-based authentication and connected to the production REST API deployed on Render.
- Technologies:** React Native, Expo, JavaScript, React Navigation, Expo SecureStore, Axios, REST API

Built a cat vs. dog image classifier using a custom CNN with an end-to-end pipeline covering data preprocessing, data augmentation, Batch Normalization, Dropout, and optimized training callbacks, integrated into a Flask backend with a responsive drag-and-drop web interface displaying real-time confidence scores.

- **Technologies:** Python, TensorFlow/Keras, Flask, NumPy, Matplotlib, HTML, CSS, JavaScript, GitHub

NeuroPrice – Laptop Price Predictor [GitHub](#)

Nov 2025 – Dec 2025

Developed an end-to-end machine learning pipeline to predict laptop prices from detailed technical specifications. Implemented data cleaning, outlier handling, feature engineering, dimensionality reduction (PCA), scaling, encoding, feature selection, and trained multiple regression models (Random Forest, XGBoost, ANN) while ensuring leakage-free train-test separation. Packaged the inference pipeline for production-ready predictions using joblib & pickle.

- **Technologies:** Python, Flask, Scikit-learn, Pandas, NumPy, Matplotlib, XGBoost, TensorFlow/Keras, HTML, CSS, JavaScript

StuMind – AI-Powered Student Depression Risk Predictor [GitHub](#) [Live Site](#)

Aug 2025 – Nov 2025

Developed an interactive machine learning web application that enables students to instantly assess their depression risk through a user-friendly interface. Implemented data cleaning, feature engineering, outlier handling, scaling, encoding, feature selection, feature extraction, model training (KNN, Logistic Regression, Random Forest, Decision Tree, SVM, ANN). Deployed KNN via Flask.

- **Technologies:** Python, Flask, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, PCA, SMOTE, HTML, CSS

SaleSphere – Web-Based Property Rental System [GitHub](#)

Aug 2025 – Oct 2025

Developed SaleSphere, a full-stack property rental web application connecting Tenants, Landlords, and System Admins. Features include secure authentication, role-based dashboards, property listing and approval workflows, booking management, simulated card payments, and a reviews & ratings system.

- **Technologies:** Java EE (Servlets & JSP), MVC Architecture, SQL Server, Observer Design Pattern, HTML, Tailwind CSS, JavaScript, UML, SDLC, Agile & Scrum

TOYMART – Java Based E-Commerce Toy Store [GitHub](#)

Mar 2025 – May 2025

Built a lightweight, functional e-commerce toy store using Java OOP, Servlets, and JSP with MVC architecture. Implements file-based storage, user roles, a toy catalog, DSA-based sorting algorithms for toy catalog sorting, and inventory management using Linked Lists — strengthening data structures and server-side logic without a database.

- **Technologies:** Java, Servlets, JSP, Tomcat, HTML, CSS, JavaScript, File I/O, Linked List, Bubble Sort

CERTIFICATIONS
